

Recitation

Each recitation session consists of two halves:

- The first half will be a mini-lecture on supplementary materials and topics of interest. In-class experiments will also be conducted during which you will play games that mimic real economic settings, such as trading in competitive markets. The goal is to facilitate learning and encourage you to think on a deeper level how economic theory works or fails to work in practice.
- The second half will be a Q&A session on course materials and homework problems.

Attendance of recitation sessions is not mandatory, but encouraged. For each session that you attend, you will receive 1 J point¹. In addition, at the end of the semester, all individuals who have attended more than 5 review sessions will have the eligibility to participate in a lottery, with the winning price being 25 J points².

For details on how this contributes to your final grade, see: [Final Grade Calculation: A Guide for the Perplexed](#).

¹ i.e., if you attend 10 sessions this semester, you will get 10 J .

² So a lucky person who attends 5 recitation sessions and wins the final lottery will be able earn 30 J . Suppose no adjustment is made to non-exam scores at the end of the semester, i.e., $J^A = J$. Then 30 J will translate into 12 points for your final course grade.
